Authors

Dr. Stanley M. Burstein

Dr. Stanley M. Burstein is Professor Emeritus of Ancient History and former Chair of the Department of History at California State University, Los Angeles. Dr. Burstein received his B.A., M.A., and Ph.D. degrees from the University of California at Los Angeles. The author of more than 100 books, articles, and chapters on ancient history, Dr. Burstein co-authored The Ancient World: Readings in Social and Cultural History (Englewood Cliffs, 2002). His specialties include ancient Greek history, Greek and Roman Egypt, and Kush. Dr. Burstein has served as president of the Association of Ancient Historians and was a member of the Educational Testing Service Task Force for Development of the AP World History Course.

Dr. Richard Shek

Dr. Richard Shek is Professor of Humanities and Religious Studies at California State University, Sacramento. A native of China, Dr. Shek received his B.A. in Tokyo, Japan, and he received his M.A. and a Ph.D. in history from the University of California at Berkeley. His specialties are East Asian cultural and religious history. The author of numerous publications on Confucianism, Daoism, Buddhism, and popular religion in China and Japan, Dr. Shek co-edited Heterodoxy in Late Imperial China: Essays in Inquiry (University of California Press, 2004). Dr. Shek was inducted into the International Educators’ Hall of Fame in 1999.

Contributing Author

Kylene Beers
Senior Reading Researcher
School Development Program
Yale University
New Haven, Connecticut

A former middle school teacher, Dr. Beers has turned her commitment to helping struggling readers into the major focus of her research, writing, speaking, and teaching. She is the former editor of the National Council of Teachers of English literacy journal *Voices from the Middle* and has also served as NCTE president. Her published works include *When Kids Can’t Read: What Teachers Can Do* (Heinemann, 2002).

General Editor

Frances Marie Gipson
Secondary Literacy
Los Angeles Unified School District
Los Angeles, California

In her current position, Frances Gipson guides reform work for secondary instruction and supports its implementation. She has designed curriculum at the district, state, and national levels. Her leadership of a coaching collaborative with UCLA’s Subject Matter Projects evolved from her commitment to rigorous instruction and to meeting the needs of diverse learners.

Senior Literature and Writing Specialist

Carol Jago
English Department Chairperson
Santa Monica High School
Santa Monica, California

An English teacher at the middle and high school levels for 26 years, Carol Jago also directs the Reading and Literature Project at UCLA. She has been published in numerous professional journals and has authored several books, including *Cohesive Writing: Why Concept Is Not Enough* (Boynton/Cook, 2002). She became president of the National Council of Teachers of English (NCTE) in 2010.

CONTENTS
HISTORY programming greatly appeals to educators and young people who are drawn into the visual stories our documentaries tell. Our Education Department has a long-standing record in providing teachers and students with curriculum resources that bring the past to life in the classroom. Our content covers a diverse variety of subjects, including American and world history, government, economics, the natural and applied sciences, arts, literature and the humanities, health and guidance, and even pop culture.

The HISTORY website, located at www.history.com, is the definitive historical online source that delivers entertaining and informative content featuring broadband video, interactive timelines, maps, games, podcasts and more.

“HISTORY™ is the leading destination for revealing, award-winning, original non-fiction series and event-driven specials that connect history with viewers in an informative, immersive and entertaining manner across multiple platforms. HISTORY is part of A&E Television Networks (AETN), a joint venture of Hearst Corporation, Disney/ABC Television Group and NBC Universal, an award-winning, international media company that also includes, among others, A&E Network™, BIO™, and History International™.

“We strive to engage, inspire and encourage the love of learning...”

Since its founding in 1995, HISTORY has demonstrated a commitment to providing the highest quality resources for educators. We develop multimedia resources for K-12 schools, two- and four-year colleges, government agencies, and other organizations by drawing on the award-winning documentary programming of A&E Television Networks. We strive to engage, inspire and encourage the love of learning by connecting with students in an informative and compelling manner. To help achieve this goal, we have formed a partnership with Houghton Mifflin Harcourt.
In addition to premium video-based resources, HISTORY has extensive offerings for teachers, parents, and students to use in the classroom and in their in-home educational activities, including:

- **The Idea Book for Educators** is a biannual teacher’s magazine, featuring guides and info on the latest happenings in history education to help keep teachers on the cutting edge.

- **HISTORY Classroom** ([www.history.com/classroom](http://www.history.com/classroom)) is an interactive website that serves as a portal for history educators nationwide. Streaming videos on topics ranging from the Roman aqueducts to the civil rights movement connect with classroom curricula.

- **HISTORY email newsletters** feature updates and supplements to our award-winning programming relevant to the classroom with links to teaching guides and video clips on a variety of topics, special offers, and more.

- **Live webcasts** are featured each year as schools tune in via streaming video.

- **HISTORY Take a Veteran to School Day** connects veterans with young people in our schools and communities nationwide.

In addition to HOUGHTON MIFFLIN HARCOURT, our partners include the Library of Congress, the Smithsonian Institution, National History Day, The Gilder Lehrman Institute of American History, the Organization of American Historians, and many more. HISTORY video is also featured in museums throughout America and in over 70 other historic sites worldwide.
Become an Active Reader

Did you ever think you would begin reading your social studies book by reading about reading? Actually, it makes better sense than you might think. You would probably make sure you learned some soccer skills and strategies before playing in a game. Similarly, you need to learn some reading skills and strategies before reading your social studies book. In other words, you need to make sure you know whatever you need to know in order to read this book successfully.

**Tip #1**

**Use the Reading Social Studies Pages**

Take advantage of the two pages on reading at the beginning of every chapter. Those pages introduce the chapter themes; explain a reading skill or strategy; and identify key terms, people, and academic vocabulary.

**Themes**

Why are themes important? They help our minds organize facts and information. For example, when we talk about baseball, we may talk about types of pitches. When we talk about movies, we may discuss animation.

Historians are no different. When they discuss history or social studies, they tend to think about some common themes: Economics, Geography, Religion, Politics, Society and Culture, and Science and Technology.

**Reading Skill or Strategy**

Good readers use a number of skills and strategies to make sure they understand what they are reading. These lessons will give you the tools you need to read and understand social studies.

**Key Terms, People, and Academic Vocabulary**

Before you read the chapter, review these words and think about them. Have you heard the word before? What do you already know about the people? Then watch for these words and their meanings as you read the chapter.
Tip #2
Read like a Skilled Reader

You will never get better at reading your social studies book—or any book for that matter—unless you spend some time thinking about how to be a better reader.

Skilled readers do the following:

- They preview what they are supposed to read before they actually begin reading. They look for vocabulary words, titles of sections, information in the margin, or maps or charts they should study.
- They divide their notebook paper into two columns. They title one column “Notes from the Chapter” and the other column “Questions or Comments I Have.”
- They take notes in both columns as they read.
- They read like active readers. The Active Reading list below shows you what that means.
- They use clues in the text to help them figure out where the text is going. The best clues are called signal words.
  
  **Chronological Order Signal Words:**
  first, second, third, before, after, later, next, following that, earlier, finally
  
  **Cause and Effect Signal Words:**
  because of, due to, as a result of, the reason for, therefore, consequently
  
  **Comparison/Contrast Signal Words:**
  likewise, also, as well as, similarly, on the other hand

---

### Active Reading

Successful readers are active readers. These readers know that it is up to them to figure out what the text means. Here are some steps you can take to become an active, and successful, reader.

- **Predict** what will happen next based on what has already happened. When your predictions don’t match what happens in the text, re-read the confusing parts.
- **Question** what is happening as you read. Constantly ask yourself why things have happened, what things mean, and what caused certain events.
- **Summarize** what you are reading frequently. Do not try to summarize the entire chapter! Read a bit and then summarize it. Then read on.
- **Connect** what is happening in the part you’re reading to what you have already read.
- **Clarify** your understanding. Stop occasionally to ask yourself whether you are confused by anything. You may need to re-read to clarify, or you may need to read further and collect more information before you can understand.
- **Visualize** what is happening in the text. Try to see the events or places in your mind by drawing maps, making charts, or jotting down notes about what you are reading.
Tip #3
Pay Attention to Vocabulary
It is no fun to read something when you don’t know what the words mean, but you can’t learn new words if you only use or read the words you already know. In this book, we know we have probably used some words you don’t know. But, we have followed a pattern as we have used more difficult words.

Key Terms and People
At the beginning of each section you will find a list of key terms or people that you will need to know. Be on the lookout for those words as you read through the section.

The Afterlife
Many Egyptians believed in the afterlife, or life after death. They believed that the afterlife was a happy place. Paintings from Egyptian tombs show the afterlife as an ideal world where all the people are young and healthy.

Accademic Vocabulary
When we use a word that is important in all classes, not just social studies, we define it in the margin under the heading Academic Vocabulary. You will run into these academic words in other textbooks, so you should learn what they mean while reading this book.
As you read this social studies textbook, you will be more successful if you know or learn the meanings of the words on this page. There are two types of words listed here. The first list contains academic words, the words we pointed out at the bottom of the previous page. These words are important in all classes, not just social studies. The second list contains words that are special to this particular topic of social studies, world history.

### Academic Words

<table>
<thead>
<tr>
<th>Word</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>acquire</td>
<td>to get</td>
</tr>
<tr>
<td>affect</td>
<td>to change or influence</td>
</tr>

How to Make This Book Work for You

Studying history will be easy for you using this textbook. Take a few minutes to become familiar with the easy-to-use structure and special features of this history book. See how this textbook will make history come alive for you!

Unit
Each chapter of this textbook is part of a Unit of study focusing on a particular time period. Each unit opener provides an illustration, usually showing a young person of the period, and gives you an overview of the exciting topics that you will study in the unit.

Chapter
Each Chapter includes a chapter-opener introduction with a time line of important events, a Social Studies Skills activity, Chapter Review activity, Chapter Review pages, and a Standardized Test Practice page.

Reading Social Studies
These chapter level reading lessons give you skills and practice that you can use to help you read the textbook. Within each chapter there is a Focus on Reading note in the margin on the page where the reading skill is covered. There are also questions in the Chapter Review activity to make sure that you understand the reading skill.

Social Studies Skills
The Social Studies Skills lessons give you an opportunity to learn and use a skill that you will most likely use again. You will also be given a chance to make sure that you understand each skill by answering related questions in the Chapter Review activity.
Study the legend carefully to be sure of the growth or loss of a country’s territory to colors or symbols that might help you understand what each color or symbol represents.

Read the title to find out what the map is about. You should be able to visualize and understand the relationships between different countries and the changes that may have occurred over time. Being able to interpret such maps makes the growth and shrinkage of political boundaries and features easier to track.

**Some historical political maps show how boundaries have changed over time.**

**Understanding the Skill**

**Social Studies Skills**

**Political Maps**

Political maps are used to show human cultural features such as cities, states, and countries. Modern political maps might also include information about natural resources, such as forests or mineral deposits. Historical political maps show what the world looked like in the past.

**Koumbi Saleh**

Koumbi Saleh was an ancient city in what is now modern-day Ivory Coast. It was founded in the 13th century and served as the capital of the late 13th and early 14th centuries. The city was located on a hill overlooking a river, which made it an important trade center.

**Emirates**

Gao was a city in the Mali Empire, which existed from the 13th to the 15th centuries. It was located in present-day Mali and was known for its gold trade.

**Mali & Songhai Empires**

The Mali Empire was one of the largest and most powerful empires in West Africa from the 13th to the 16th centuries. Its capital was Gao. The Songhai Empire was founded by the Baghnet, a dynasty that ruled from the 13th to the 16th centuries. Its capital was Timbuktu.

**Who controlled the city of Gao in the year 1100?**

In the year 1100, the city of Gao was controlled by the Songhai Empire.

**How are these two paintings the same and different?**

To make his art more real, Leonardo da Vinci studied anatomy, the structure of human bodies. He also used perspective to make his paintings more realistic. How are these two paintings similar and different?

**To connect what you have just studied in the next section, we include the Summary and Preview.**

**Summary and Preview**

Changes in daily life led to the beginning of an era called the Renaissance. During the late 1300s, a great number of art, literature, and learning occurred in Italy. In the next section, you will learn how Renaissance ideas changed as they spread across Europe.

**Reading Check questions** end each section of content so that you can test whether or not you understand what you have just studied.

**Section Assessments** The section assessment boxes provide an opportunity for you to make sure that you understand the main ideas of the section. We also provide assessment practice online!
UNIT 1

BEGINNINGS TO 5,000 YEARS AGO

Early Humans and Societies

Chapter 1 Uncovering the Past
Chapter 2 The Stone Ages and Early Cultures
What You Will Learn…

History is the study of the past, and people who study history are called historians. Historians try to learn what life was like for people long ago in places around the world. To understand the people and places of the past, historians study clues and evidence.

Some historians study the earliest humans. Early people hunted animals, gathered plants, and learned how to make stone tools. Eventually, people learned to grow food and raise animals for themselves.

In the next two chapters, you will learn about the subject of history and about the world’s earliest peoples.

Explore the Art

In this scene, young Maria de Sautuola discovers prehistoric cave paintings in Altamira, Spain, in 1879. What do these paintings say about the life of early people?
CHAPTER 1

Uncovering the Past

Essential Question  Why do scholars study the people, events, and ideas of long ago?

What You Will Learn...
In this chapter you will learn how historians and geographers study the past in order to learn more about the present.

SECTION 1: Studying History ...................... 6
The Big Idea  Historians use many kinds of clues to understand how people lived in the past.

SECTION 2: Studying Geography ................. 12
The Big Idea  Physical geography and human geography contribute to the study of history.

Focus on Writing
A Job Description  What is the job of a historian? an archaeologist? a geographer? In this chapter you will read about the work of people who study the past—its events, its people, and its places. Then you will write a job description to include in a career-planning guide.
This photo shows clay warriors that were found in China. Finds like these teach us a lot about the history of ancient places.
Focus on Themes  This chapter sets the stage for reading the rest of the book. In it you will learn the definitions of many important terms. You will learn how studying history helps you understand the past and the present. You will also read about the study of geography and learn how the world’s physical features affected when and where civilization began. Finally, you will begin to think about how society and culture and science and technology have interacted throughout time.

Specialized Vocabulary of History

Focus on Reading  Have you ever done a plié at the barre or sacked the quarterback? You probably haven’t if you’ve never studied ballet or played football. In fact, you may not even have known what those words meant.

Specialized Vocabulary  Plié, barre, sack, and quarterback are special vocabulary, words that are used in only one field. History has its own specialized vocabulary. The charts below list some terms often used in the study of history.

<table>
<thead>
<tr>
<th>Terms that identify periods of time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Decade</td>
</tr>
<tr>
<td>Century</td>
</tr>
<tr>
<td>Age</td>
</tr>
<tr>
<td>Era</td>
</tr>
<tr>
<td>Ancient</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Terms used with dates</th>
</tr>
</thead>
<tbody>
<tr>
<td>circa or c.</td>
</tr>
<tr>
<td>BC</td>
</tr>
<tr>
<td>AD</td>
</tr>
<tr>
<td>BCE</td>
</tr>
<tr>
<td>CE</td>
</tr>
</tbody>
</table>
You Try It!

As you read this textbook, you will find many examples of specialized vocabulary terms that historians use. Many of these terms will be highlighted in the text and defined for you as key terms. Others may not be highlighted, but they will still be defined. For some examples, read the passage below. Learning these words as you come across them will help you understand what you read later in the book. For your own reference, you may wish to keep a list of important terms in your notebook.

Vocabulary in Context

We must rely on a variety of sources to learn history. For information on the very first humans, we have fossil remains. A fossil is a part or imprint of something that was once alive. Bones and footprints preserved in rock are examples of fossils.

As human beings learned to make things, by accident they also created more sources of information for us. They made what we call artifacts, objects created by and used by humans. Artifacts include coins, arrowheads, tools, toys, and pottery.

Answer the following questions about the specialized vocabulary of history.

1. What is a fossil? What is an artifact? How can you tell?

2. Were you born in a BC year or an AD year?

3. Put the following dates in order: AD 2000, 3100 BC, 15 BCE, AD 476, AD 3, CE 1215

4. If you saw that an event happened c. AD 1000, what would that mean?
**Studying History**

**If YOU were there...**

You are a student helping scholars uncover the remains of an ancient city. One exciting day you find a jar filled with bits of clay on which strange symbols have been carved. You recognize the marks as letters because for years you have studied the language of the city’s people. This is your chance to put your skills to use!

**What might you learn from the ancient writings?**

**The Study of the Past**

The people of the ancient world didn’t build skyscrapers, invent the automobile, or send spaceships to Mars. But they did remarkable things. Among their amazing feats were building huge temples, inventing writing, and discovering planets. Every step we take—in technology, science, education, literature, and all other fields—builds on what people did long ago. We are who we are because of what people did in the past.

**What Is History?**

*History* is the study of the past. A battle that happened 5,000 years ago and an election that happened yesterday are both parts of history.

Historians are people who study history. Their main concern is human activity in the past. They want to know how people lived and why they did the things they did. They try to learn about the problems people faced and how they found solutions.
Historians are interested in how people lived their daily lives. How and where did they work, fight, trade, farm, and worship? What did they do in their free time? What games did they play? In other words, historians study the past to understand people’s culture—the knowledge, beliefs, customs, and values of a group of people.

**What Is Archaeology?**

An important field that contributes much information about the past is archaeology (ahr-kee-ah-luh-jee). It is the study of the past based on what people left behind. Archaeologists, or people who practice archaeology, explore places where people once lived, worked, or fought. The things that people left in these places may include jewelry, dishes, or weapons. They range from stone tools to huge buildings.

Archaeologists examine the objects they find to learn what they can tell about the past. In many cases, the objects that people left behind are the only clues we have to how they lived.

**Reading Check**  Comparing How are the fields of history and archaeology similar?

**Studying the Past**

Historians and archaeologists study the people and places of the past. For example, by studying the remains of an ancient Egyptian temple (right), they can learn about the lives of the ancient Egyptians (left).
Understanding through History

There are many reasons why people study history. Understanding the past helps us to understand the world today. History can also provide us with a guide to making better decisions in the future.

Knowing Yourself

History can teach you about yourself. What if you did not know your own past? You would not know which subjects you liked in school or which sports you enjoyed. You would not know what makes you proud or what mistakes not to repeat. Without your own personal history, you would not have an identity.

History is just as important for groups as it is for individuals. What would happen if countries had no record of their past? People would know nothing about how their governments came into being. They would not remember their nation’s great triumphs or tragedies. History teaches us about the experiences we have been through as a people. It shapes our identity and teaches us the values that we share.

Knowing Others

Like today, the world in the past included many cultures. History teaches about the cultures that were unlike your own. You learn about other peoples, where they lived, and what was important to them. History teaches you how cultures were similar and how they were different.

History also helps you understand why other people think the way they do. You learn about the struggles people have faced. You also learn how these struggles have affected the way people view themselves and others.
For example, Native Americans, enslaved Africans, and Asian immigrants all played vital roles in our country’s history. But the descendants of each group have a different story to tell about their ancestors’ contributions.

Learning these stories and others like them that make up history can help you see the viewpoints of other peoples. It can help teach you to respect and understand different opinions. This knowledge helps promote tolerance. History can also help you relate more easily to people of different backgrounds. In other words, knowing about the past can help build social harmony throughout the world today.

Knowing Your World
History can provide you with a better understanding of where you live. You are part of a culture that interacts with the outside world. Even events that happen in other parts of the world affect your culture. History helps you to understand how today’s events are shaped by the events of the past. So knowing the past helps you figure out what is happening now.

History is concerned with the entire range of human activities. It is the record of humanity’s combined efforts. So while you are studying history, you can also learn more about math, science, religion, government, and many other topics.

Studying the past will also help you develop mental skills. History encourages you to ask important questions. It forces you to analyze the facts you learn. Such analysis teaches you how to recognize which information is important and which is extra. This skill helps you to find the main facts when studying any topic.

History also promotes good decision-making skills. A famous, often repeated saying warns us that those who forget their past are doomed to repeat it. This means that people who ignore the results of past decisions often make the same mistakes over and over again.

Individuals and countries both benefit from the wisdom that history can teach. Your own history may have taught you that studying for a test results in better grades. In a similar way, world history has taught that providing young people with education makes them more productive when they become adults.

Historians have been talking about the value of history for centuries. More than 2,000 years ago a great Greek historian named Polybius wrote:

“The purpose of history is not the reader’s enjoyment at the moment of perusal [reading it], but the reformation [improvement] of the reader’s soul, to save him from stumbling at the same stumbling block many times over.”

—Polybius, from The Histories, Book XXXVIII

Focus on Reading
What does the word century mean?

BOOK
History Makers
One way to study history is to study the “big names” of the past, the people whose lives and actions shaped the times and places in which they lived. In this passage from a collection of essays, historian Barbara W. Tuchman explains why some historians focus their attention on such people.

“They are the captains and kings, saints and fanatics, traitors, rogues and villains, pathfinders and explorers, thinkers and creators, even, occasionally, heroes. They are significant—if not necessarily admirable ... they matter. They are the actors, not the acted upon, and are consequently that much more interesting.”

—Barbara W. Tuchman, from Practicing History: Selected Essays

ANALYZING PRIMARY SOURCES
What words does the author use to make history sound interesting?

Focus on Reading
What does the word century mean?

Reading Check
Summarizing What are some benefits of studying history?
Using Clues

We must rely on a variety of sources to learn history. For information on the very first humans, we have fossil remains. A fossil is a part or imprint of something that was once alive. Bones and footprints preserved in rock are examples of fossils.

As human beings learned to make things, by accident they also created more sources of information for us. They made what we call artifacts, objects created by and used by humans. Artifacts include coins, arrowheads, tools, toys, and pottery. Archaeologists examine artifacts and the places where the artifacts were found to learn about the past.

Sources of Information

About 5,000 years ago, people invented writing. They wrote laws, poems, speeches, battle plans, letters, contracts, and many other things. In these written sources, historians have found countless clues about how people lived. In addition, people have recorded their messages in many ways over the centuries. Historians have studied writing carved into stone pillars, stamped onto clay tablets, scribbled on turtle shells, typed with typewriters, and sent by computer.

Historical sources are of two types. A primary source is an account of an event created by someone who took part in or witnessed the event. Treaties, letters, diaries, laws, court documents, and royal commands are all primary sources. An audio or video recording of an event is also a primary source.

A secondary source is information gathered by someone who did not take part in or witness an event. Examples include history textbooks, journal articles, and encyclopedias. The textbook you are reading right now is a secondary source. The historians who wrote it did not take part in the events described. Instead, they gathered information about these events from different sources.
Sources of Change

Writers of secondary sources don’t always agree about the past. Historians form different opinions about the primary sources they study. As a result, historians may not interpret past events in the same way.

For example, one writer may say that a king was a brilliant military leader. Another may say that the king’s armies only won their battles because they had better weapons than their enemies did. Sometimes new evidence leads to new conclusions. As historians review and reanalyze information, their interpretations can and do change.

**READING CHECK**
Contrasting How are primary and secondary sources different?

**SUMMARY AND PREVIEW**
We benefit from studying the past. Scholars use many clues to help them understand past events. In the next section you will learn how geography connects to history.

---

**Section 1 Assessment**

**Reviewing Ideas, Terms, and People**

1. a. **Identify** What is **history**?
   b. **Explain** What kinds of things do historians try to discover about people who lived in the past?
   c. **Predict** What kinds of evidence will historians of the future study to learn about your **culture**?

2. a. **Describe** How does knowing its own history provide a group with a sense of unity?
   b. **Elaborate** Explain the meaning of the phrase, “Those who forget their past are doomed to repeat it.”

3. a. **Identify** What is a **primary source**?
   b. **Explain** How did the invention of writing affect the sources on which historians rely?
   c. **Elaborate** Could a photograph be considered a primary source? Why or why not?

**Critical Thinking**

4. **Categorizing** Using your notes, identify four types of clues to the past and give at least two examples of each.

5. **Understanding What Historians Do** What is the difference between a historian and an archaeologist? Take notes about the work these people do.
SECTION 2

What You Will Learn…

1. Geography is the study of places and people.
2. Studying location is important to both physical and human geography.
3. Geography and history are closely connected.

Main Ideas

If YOU were there…

Your parents are historians researching a city that disappeared long ago. You go with them to a library to help search for clues to the city’s location and fate. While thumbing through a dusty old book, you find an ancient map stuck between two pages. Marked on the map are rivers, forests, mountains, and straight lines that look like roads. It is a map that shows the way to the lost city!

How can this map help you find the city?

Physical geography and human geography contribute to the study of history.

Building Background

You have read how historians and archaeologists help us learn about the past. Another group of scholars—geographers—also contribute to our study of history.

Studying Places and People

When you hear about an event on the news, the first questions you ask may be, “Where did it happen?” and “Who was there?” Historians ask the same questions about events that happened in the past. That is why they need to study geography. Geography is the study of the earth’s physical and cultural features. These features include mountains, rivers, people, cities, and countries.

Physical Geography

Physical geography is the study of the earth’s land and features. People who work in this field are called physical geographers. They study landforms, the natural features of the land’s surface. Mountains, valleys, plains, and other such places are landforms.

Physical geographers also study climate, the pattern of weather conditions in a certain area over a long period of time. Climate is not the same as weather. Weather is the conditions at a specific time and place. If you say that your city has cold winters, you are talking about climate. If you say it is below freezing and snowing today, you are talking about the weather.
Climate affects many features of a region. For example, it affects plant life. Tropical rain forests require warm air and heavy rain, while a dry climate can create deserts. Climate also affects landforms. For example, constant wind can wear down mountains into flat plains.

Although climate affects landforms, landforms can also affect climate. For example, the Coast Ranges in northern California are mountains parallel to the Pacific coast. As air presses up against these mountains, it rises and cools. Any moisture that the air was carrying falls as rain. Meanwhile, on the opposite side of the range, the Central Valley stays dry. In this way, a mountain range creates two very different climates.

Landforms and climate are part of a place’s environment. The environment includes all the living and nonliving things that affect life in an area. This includes the area’s climate, land, water, plants, soil, animals, and other features.

Human Geography

The other branch of geography is human geography—the study of people and the places where they live. Specialists in human geography study many different things about people and their cultures. What kind of work do people do? How do they get their food? What are their homes like? What religions do they practice?

Human geography also deals with how the environment affects people. For example, how do people who live near rivers protect themselves from floods? How do people who live in deserts survive? Do different environments affect the size of families? Do people in certain environments live longer? Why do some diseases spread easily in some environments but not in others? As you can see, human geographers study many interesting questions about people and this planet.

**READING CHECK** Summarizing What are the two main branches of geography?
Studying Location

Both physical and human geographers study location. Location is the exact description of where something is. Every place on Earth has a specific location.

No two places in the world are exactly alike. Even small differences between places can lead to major differences in how people live. That is why geographers try to understand the effects that different locations have on human populations, or groups of people.

By comparing locations, geographers learn more about the factors that affected each of them. For example, they may study why a town grew in one location while a town nearby got smaller.

Learning from Maps

To study various locations, geographers use maps. A map is a drawing of an area. Some maps show physical features. Others show cities and the boundaries of states or countries. Most maps have symbols to show different things. For example, large dots often stand for cities. Blue lines show where rivers flow. Most maps also include a guide to show direction.

People have been making maps for more than 4,000 years. Maps help with many activities. Planning battles, looking for new lands, and designing new city parks all require good maps. On the first day of class, you may have used a map of your school to find your classrooms.

Studying Maps

By studying and comparing maps, you can see how a place’s physical and human features are related.

1. What are some of California’s main physical features? Where are the state’s highest mountains?

2. What climates are found in California? How are the climate regions related to California’s physical features?
Learning about Regions

Learning about regions is another key part of studying geography. A **region** is an area with one or more features that make it different from surrounding areas. These features may be physical, such as forests or grasslands. There may also be differences in climate. For example, a desert area is a type of region. Physical barriers such as mountains and rivers often form a region’s boundaries.

Human features can also define regions. An area with many cities is one type of region. An area with only farms is another type. Some regions are identified by the language that people there speak. Other regions are identified by the religion their people practice.

**Reading Check**

**Categorizing** What are some types of features that can identify a region?

**Primary Source**

**BOOK**

**What Geography Means**

Some people think of geography as the ability to read maps or name state capitals. But as geographer Kenneth C. Davis explains, geography is much more. It is related to almost every branch of human knowledge.

"Geography doesn’t simply begin and end with maps showing the location of all the countries of the world. In fact, such maps don’t necessarily tell us much. No—geography poses fascinating questions about who we are and how we got to be that way, and then provides clues to the answers. It is impossible to understand history, international politics, the world economy, religions, philosophy, or ‘patterns of culture’ without taking geography into account."

—Kenneth C. Davis, from *Don’t Know Much About Geography*

**ANALYZING PRIMARY SOURCES**

**Why does the writer think that geography is important?**

---

**California: Population**

- One dot represents 25,000 people
- State capital
- 0 - 75 - 150 Miles
- 0 - 75 - 150 Kilometers

3 Where are California’s two main population centers? What kind of climate is found in these areas?

**California: Roads**

- Interstate highways
- Other highways
- State capital
- 0 - 75 - 150 Miles
- 0 - 75 - 150 Kilometers

4 How are California’s roads related to its physical features? How are they related to its population centers?
Geography and History

Geography gives us important clues about the people and places that came before us. Like detectives, we can piece together a great deal of information about ancient cultures by knowing where people lived and what the area was like.

Geography Shapes Cultures

Geography also influenced the early development of cultures. Early peoples, for example, developed vastly different cultures because of their environments. People who lived along rivers learned to make fishhooks and boats, while those far from rivers did not. People who lived near forests built homes from wood. In other areas, builders had to use mud or stone. Some people developed religious beliefs based on the geography of their area. For example, ancient Egyptians believed that the god Hapi controlled the Nile River.

Geography also played a role in the growth of civilizations. The world’s first societies formed along rivers. Crops grown on the fertile land along these rivers fed large populations.

Some geographic features could also protect areas from invasion. A region surrounded by mountains or deserts, for example, was hard for attackers to reach.

Geography Affects Resources

An area’s geography was critical to early settlements. People could survive only in areas where they could get enough food and water. Early people settled in places that were rich in resources, materials found in the earth that people need and value. All through history, people have used a variety of resources to meet their basic needs.

In early times, essential resources included water, animals, fertile land, and stones for tools. Over time, people learned to use other resources, including metals such as copper, gold, and iron.
Geography Influences History

Geography has helped shape history and has affected the growth of societies. People in areas with many natural resources could use their resources to get rich. They could build glorious cities and powerful armies. Features such as rivers also made trade easier. Many societies became rich by trading goods with other peoples.

On the other hand, geography has also caused problems. Floods, for example, have killed millions of people. Lack of rainfall has brought deadly food shortages. Storms have wrecked ships, and with them, the hopes of conquerors. In the 1200s, for example, a people known as the Mongols tried to invade Japan. However, most of the Mongol ships were destroyed by a powerful storm. Japanese history may have been very different if the storm had not occurred.

The relationship between geography and people has not been one-sided. For centuries, people have influenced their environments in positive and negative ways. People have planted millions of trees. They have created new lakes in the middle of deserts. But people have also created wastelands where forests once grew and built dams that flooded ancient cities. This interaction between humans and their environment has been a major factor in history. It continues today.

**READING CHECK**  **Summarizing** In what ways has geography shaped human history?

**SUMMARY AND PREVIEW** The field of geography includes physical geography and human geography. Geography has had a major influence on history. In the next chapter you will learn how geography affected the first people.

**Section 2 Assessment**

**Reviewing Ideas, Terms, and People**

1. a. **Define** What is geography?
   b. **Summarize** What are some of the topics included in human geography?

2. a. **Describe** Identify a region near where you live, and explain what sets it apart as a region.
   b. **Predict** How might a map of a city's landforms help an official who is planning a new city park?

3. a. **Recall** Where did early peoples tend to settle?
   b. **Compare and Contrast** How could a river be both a valuable resource and a problem for a region?

**Critical Thinking**

4. **Comparing and Contrasting** Using your note-taking chart, compare and contrast physical and human geography.

**FOCUS ON WRITING**

5. **Understanding What Geographers Do** In this section you learned how geographers contribute to the study of history. What is the difference between a physical geographer and a human geographer?
Maps are useful tools for historians. By creating a map of how a place used to be, historians can learn where things were located and what the place was like. In other words, by studying a place’s geography, we can also learn something about its history.

This map shows the ancient city of Teotihuacán (tay-oh-tee-wah-KAHN) in central Mexico. Teotihuacán reached its height around AD 500. Study this map. What can it tell you about the history of the city?

**Size and Importance** As the map shows, Teotihuacán was a large city. It had many buildings and a large population. From this, you might conclude that the city was important, just as big cities are important today.
**Religion** The giant buildings that dominate the heart of the city, such as the Pyramid of the Sun, are religious temples. From this, you can conclude that religion was very important to the people of Teotihuacán.

**Technology** The map shows that this river turns at right angles, just like the city’s streets. The people of Teotihuacán must have changed the course of this river. That tells you that they had advanced engineering skills and technology.

---

**INTERPRETING MAPS**

1. **Place** How does the map indicate that Teotihuacán was an important place?
2. **Location** What can you conclude from the fact that large religious buildings are located in the heart of the city?
Recognizing Bias

Understand the Skill

Everybody has convictions, or things that they strongly believe. However, if we form opinions about people or events based only on our beliefs, we may be showing bias. Bias is an idea about someone or something based solely on opinions, not facts.

There are many types of bias. Sometimes people form opinions about others based on the group to which that person belongs. For example, some people might believe that all teenagers are selfish or that all politicians are dishonest. These are examples of a type of bias called stereotyping. Holding negative opinions of people based on their race, religion, age, gender, or similar characteristics is known as prejudice.

We should always be on guard for the presence of personal biases. Such biases can slant how we view, judge, and provide information. Honest and accurate communication requires people to be as free of bias as possible.

Learn the Skill

As you read or write, watch out for biases. One way to identify a bias is to look for facts that support a statement. If a belief seems unreasonable when compared to the facts, it may be a sign of bias.

Another sign of bias is a person’s unwillingness to question his or her belief if it is challenged by evidence. People sometimes cling to views that evidence proves are wrong. This is why bias is defined as a “fixed” idea about something. It also points out a good reason why we should try to avoid being biased. Our biases can keep us from considering new ideas and learning new things.

Practice and Apply the Skill

You will meet many peoples from the past as you study world history. Their beliefs, behaviors, and ways of life may seem different or strange to you. It is important to remain unbiased and to keep an open mind. Recognize that “different” does not mean “not as good.”

Understand that early peoples did not have the technology or the accumulation of past knowledge that we have today. Be careful to not look down on them just because they were less advanced or might seem “simpler” than we are today. Remember that their struggles, learning, and achievements helped make us what we are today.

The following guidelines can help you to recognize and reduce your own biases. Keep them in mind as you study world history.

1. When discussing a topic, try to think of beliefs and experiences in your own background that might affect how you feel about the topic.

2. Try to not mix statements of fact with statements of opinion. Clearly separate and indicate what you know to be true from what you believe to be true.

3. Avoid using emotional, positive, or negative words when communicating factual information.

Professional historians try to be objective about the history they study and report. Being objective means not being influenced by personal feelings or opinions. Write a paragraph explaining why you think being objective is important in the study of history.
Reviewing Vocabulary, Terms, and People

For each statement below, write T if it is true or F if it is false. If the statement is false, write the correct term that would make the sentence a true statement.

1. **History** is the study of the past based on what people left behind.
2. Knowledge, beliefs, customs, and values of a group of people are part of their _____.
3. A handwritten letter from a soldier to his family would be considered a primary source.
4. Geography is the study of the past, whether recent or long ago.
5. Your state probably has many different _____, such as mountains, plains, and valleys.
6. Weather changes from day to day, but a location’s climate does not change as often.
7. Values are ideas that people hold dear and try to live by.

Comprehension and Critical Thinking

**SECTION 1 (Pages 6–11)**

8. **a. Describe** What is history? What is archaeology? How do the two fields work together?
   **b. Make Inferences** Why may a historian who is still alive disagree with conclusions drawn by a historian who lived a hundred years ago?
   **c. Evaluate** Do you think primary sources or secondary sources are more valuable to modern historians? Why?

**SECTION 2 (Pages 12–17)**

9. **a. Identify** What are the two main branches of geography, and how does each contribute to our understanding of history?
   **b. Analyze** If you were asked to divide your state into regions, what features would you use to define those regions? Why?
   **c. Predict** How might a long period of severe heat or cold affect the history of a city or region?
Using the Internet

10. Activity: Describing Artifacts Archaeologists study the past based on what people have left behind. Using your online textbook, explore recent archaeological discoveries. Select one artifact that interests you and write a short article about it. Write your article as if it will be printed in a school magazine. Describe the artifact in detail: What is it? Who made it? Where was it found? What does the artifact tell archaeologists and historians about the society or culture that created it? You may want to create a chart like the one below to organize your information. If possible, include illustrations with your article.

<table>
<thead>
<tr>
<th>Artifact</th>
<th>What is it?</th>
<th>Who made it?</th>
<th>Where was it found?</th>
<th>What does it tell us?</th>
</tr>
</thead>
</table>

Social Studies Skills

11. What is bias?
12. What is the difference between a personal conviction and a bias?
13. Why do historians try to avoid bias in their writing? What methods might they use to do so?
14. Do you think it is possible for a historian to remove all traces of bias from his or her writing? Why or why not?

Reading Skills

15. Specialized Vocabulary of History Read the following passage in which several words have been left blank. Fill in each of the blanks with the appropriate word that you learned in this chapter.

“Although ________ is defined as the study of the past, it is much more. It is a key to understanding our ________, the ideas, languages, religions, and other traits that make us who we are. In the ________ left behind by ancient peoples we can see reflections of our own material goods: plates and dishes, toys, jewelry, and work objects. These objects show us that human ________ has not changed that much.

Reviewing Themes

16. Society and Culture How may a historian’s description of a battle reveal information about his or her own society or culture?
17. Science and Technology If hundreds of years from now archaeologists study the things we leave behind, what may they conclude about the role of technology in American society? Explain your answer.

Focus on Writing

18. Writing Your Job Description Review your notes on the work of historians, archaeologists, and physical and human geographers. Choose one of these jobs and write a description of it. You should begin your description by explaining why the job is important. Then identify the job’s tasks and responsibilities. Finally, tell what kind of person would do well in this job. For example, a historian may enjoy reading and an archaeologist may enjoy working outdoors. When you have finished your description, you may be able to add it to a class or school guide for career planning.
DIRECTIONS: Read each question, and write the letter of the best response.

1. Which of the following subjects would interest a physical geographer the least?
   A. a place’s climate
   B. a mountain range
   C. a river system
   D. a country’s highways

2. The type of evidence that an archaeologist would find most useful is a(n)
   A. artifact.
   B. primary source.
   C. secondary source.
   D. landform.

3. Which statement best describes the relationship between people and natural environments?
   A. Natural environments do not affect how people live.
   B. People cannot change the environments in which they live.
   C. Environments influence how people live, and people change their environments.
   D. People do not live in natural environments.

4. Each of the following is a primary source except
   A. a photograph.
   B. a diary.
   C. a treaty.
   D. an encyclopedia.

5. The study of people and the places where they live is called
   A. archaeology.
   B. environmental science.
   C. human geography.
   D. history.
Essential Question  How did humans’ ways of living change as they interacted and adapted?

What You Will Learn...
In this chapter you will learn about the earliest people. You will see how they learned to make tools, hunt, gather food, and even create art.

SECTION 1: The First People ......................... 28
The Big Idea Prehistoric people learned to adapt to their environment, to make simple tools, to use fire, and to use language.

SECTION 2: Early Human Migration ................. 36
The Big Idea As people migrated around the world they learned to adapt to new environments.

SECTION 3: Beginnings of Agriculture ............. 40
The Big Idea The development of agriculture brought great changes to human society.

Focus on Writing
A Storyboard Prehistoric humans did not write. However, they did carve and paint images on cave walls. In the spirit of these images, you will create a storyboard that uses images to tell the story of prehistoric humans. Remember that a storyboard tells a story with simple sketches and short captions.
The cave painting above is in France and is more than 15,000 years old.

- **500,000**
  By this time, hominids live all across Europe.

- **10,000**
  Ice ages end. People begin to develop agriculture.

- **11,000**
  Humans occupy all of the continents except Antarctica.

- **500,000 YEARS AGO**

- **200,000**
  The first modern humans appear in Africa.

- **8,500**
  More than 5,000 people live in Çatal Hüyük, Turkey.
Focus on Themes  In this chapter you will learn about the earliest humans and how they lived. You will read about scientists who work constantly to learn more about this mysterious time. As you read, you will see the beginnings of human society and culture—the making of tools, the use of fire, and the creation of language. You will also read about the geography of the world and how it shaped where and how early people lived.

Chronological Order

Focus on Reading  History, just our like our lives, can be seen as a series of events in time. To understand history and events, we often need to see how they are related in time.

Understanding Chronological Order  The word chronological means “related to time.” Events discussed in this history book are discussed in sequence, in the order in which they happened. To understand history better, you can use a sequence chain to take notes about events in the order they happened.

Sequence Chain

A scientists goes to Africa and drives to a gorge to search for fossils.

She searches for several hours and finds a bone.

She calls another scientist to report what she found.

Writers sometimes signal chronological order, or sequence, by using words or phrases like these:

first, before, then, later, soon, after, before long, next, eventually, finally
You Try It!

The following passage is from the chapter you are about to read. Read the sentences carefully and think about order of events.

Scientists Study Remains

One archaeologist who made important discoveries about prehistory was Mary Leakey. In 1959 she found bones in East Africa that were more than 1.5 million years old. She and her husband, Louis Leakey, believed that the bones belonged to a hominid, an early ancestor of humans . . .

In 1974 anthropologist Donald Johanson found the bones of another early ancestor . . . Johanson named his find Lucy. Tests showed that she lived more than 3 million years ago . . .

In 1994 anthropologist Tim White found even older remains. He believes that the hominid he found may have lived as long as 4.4 million years ago.

After you read the sentences, answer the following questions.

1. Complete the time line below with information about scientists from the passage you just read?

   ![Time Line]

   Donald Johanson
   finds Lucy.

2. Each of the scientists discussed in the passage found the bones of people who lived at different times. Make another time line that shows the order in which these people lived. What do you notice about this order compared to the order in which the bones were found?
The First People

If YOU were there...

You live 200,000 years ago, in a time known as the Stone Age. A local toolmaker has offered to teach you his skill. You watch carefully as he strikes two black rocks together. A small piece flakes off. You try to copy him, but the rocks just break. Finally you learn to strike the rock just right. You have made a sharp stone knife!

How will you use your new skill?

Prehistoric people learned to adapt to their environment, to make simple tools, to use fire, and to use language.

Scientists Study Remains

Although humans have lived on the earth for more than a million years, writing was not invented until about 5,000 years ago. Historians call the time before there was writing prehistory. To study prehistory, historians rely on the work of archaeologists and anthropologists.

One archaeologist who made important discoveries about prehistory was Mary Leakey. In 1959 she found bones in East Africa that were more than 1.5 million years old. She and her husband, Louis Leakey, believed that the bones belonged to an early hominid (HAH-muh-nuhd), an early ancestor of humans. An ancestor is a relative who lived in the past.

In fact, the bones belonged to an Australopithecus (aw-stray-loh-PI-thuh-kuhs), one of the earliest ancestors of humans. In 1974 anthropologist Donald Johanson (joh-HAN-suhn) found bones from another early ancestor. He described his discovery:

“We reluctantly headed back toward camp ... I glanced over my right shoulder. Light glinted off a bone. I knelt down for a closer look ... Everywhere we looked on the slope around us we saw more bones lying on the surface.”

–Donald Johanson, from Ancestors: In Search of Human Origins

Key Terms

prehistory, p. 28
hominid, p. 28
ancestor, p. 28
tool, p. 30
Paleolithic Era, p. 31
society, p. 33
hunter-gatherers, p. 33
Donald Johanson discovered the bones of Lucy, an early hominid that lived more than 3 million years ago.

Mary Leakey found some of the earliest ancestors of humans in Olduvai Gorge.

Johanson named his find Lucy. Tests showed that she lived more than 3 million years ago. Johanson could tell from her bones that she was small and had walked on two legs. The ability to walk on two legs was a key step in human development.

In 1994 anthropologist Tim White found even older remains. He believes that the hominid he found may have lived as long as 4.4 million years ago. But some scientists disagree with White's time estimate. Discoveries of ancient bones give us information about early humans and their ancestors, but not all scientists agree on the meaning of these discoveries.

**Reading Check**

**Drawing Inferences** What can ancient bones tell us about human ancestors?
Hominids and Early Humans

Later groups of hominids appeared about 3 million years ago. As time passed they became more like modern humans.

In the early 1960s Louis Leakey found hominid remains that he called *Homo habilis*, or “handy man.” Leakey and his son Richard believed that *Homo habilis* was more closely related to modern humans than Lucy and had a larger brain.

Scientists believe that another group of hominids appeared in Africa about 1.5 million years ago. This group is called *Homo erectus*, or “upright man.” Scientists think these people walked completely upright like modern people do.

Scientists believe that *Homo erectus* knew how to control fire. Once fire was started by natural causes, such as lightning, people used it to cook food. Fire also gave them heat and protection against animals.

Eventually hominids developed characteristics of modern humans. Scientists are not sure exactly when or where the first modern humans lived. Many think that they first appeared in Africa about 200,000 years ago. Scientists call these people *Homo sapiens*, or “wise man.” Every person alive today belongs to this group.

**READING CHECK**

Contrasting How was *Homo erectus* different from *Homo habilis*?

**Stone Age Tools**

The first humans and their ancestors lived during a long period of time called the Stone Age. To help in their studies, archaeologists divide the Stone Age into three periods based on the kinds of tools used at the time. To archaeologists, a tool is any handheld object that has been modified to help a person accomplish a task.

**Early Hominids**

Four major groups of hominids appeared in Africa between 5 million and about 200,000 years ago. Each group was more advanced than the one before it and could use better tools.

Which early hominid learned to control fire and use the hand ax?
The first part of the Stone Age is called the Paleolithic (pay-lee-uh-li-thik) Era, or Old Stone Age. It lasted until about 10,000 years ago. During this time people used stone tools.

The First Tools
Scientists have found the oldest tools in Tanzania, a country in East Africa. These sharpened stones, about the size of an adult’s fist, are about 2.6 million years old. Each stone had been struck with another rock to create a sharp, jagged edge along one side. This process left one unsharpened side that could be used as a handle.

Scientists think that these first tools were mostly used to process food. The sharp edge could be used to cut, chop, or scrape roots, bones, or meat. Tools like these, called choppers, were used for about 2 million years.

Later Tools
Over time people learned to make better tools. For example, they developed the hand ax. They often made this tool out of a mineral called flint. Flint is easy to shape, and tools made from it can be very sharp. People used hand axes to break tree limbs, to dig, and to cut animal hides.

People also learned to attach wooden handles to tools. By attaching a wooden shaft to a stone point, for example, they invented the spear. Because a spear could be thrown, hunters no longer had to stand close to animals they were hunting. As a result, people could hunt larger animals. Among the animals hunted by Stone Age people were deer, horses, bison, and elephant-like creatures called mammoths.
Hunter-Gatherers

Early people were hunter-gatherers. They hunted animals and gathered wild plants to survive. Life for these hunter-gatherers was difficult and dangerous. Still, people learned how to make tools, use fire, and even create art.

**Hunting**
Most hunting was done by men. They worked together to bring down large animals.

**Gathering**
Most gathering was done by women. They gathered food like wild plants, seeds, fruits, and nuts.

**Fire**
People learned to use fire to cook their food.

**Art**
People painted herds of animals on cave walls.

**Tools**
Early people learned to make tools such as this spear for hunting.

**ANALYZING VISUALS**
What tools are people using in this picture?
Hunter-gatherer Societies

As early humans developed tools and new hunting techniques, they formed societies. **A society** is a community of people who share a common culture. These societies developed cultures with languages, religions, and art.

**Society**

Anthropologists believe that early humans lived in small groups. In bad weather they might have taken shelter in a cave if there was one nearby. When food or water became hard to find, groups of people would have to move to new areas.

The early humans of the Stone Age were **hunter-gatherers**—people who hunt animals and gather wild plants, seeds, fruits, and nuts to survive. Anthropologists believe that most Stone Age hunters were men. They hunted in groups, sometimes chasing entire herds of animals over cliffs. This method was both more productive and safer than hunting alone.

Women in hunter-gatherer societies probably took responsibility for collecting plants to eat. They likely stayed near camps and took care of children.

**Language, Art, and Religion**

The most important development of early Stone Age culture was language. Scientists have many theories about why language first developed. Some think it was to make hunting in groups easier. Others think it developed as a way for people to form relationships. Still others think language made it easier for people to resolve issues like how to distribute food.

Language wasn’t the only way early people expressed themselves. They also created art. People carved figures out of stone, ivory, and bone. They painted and carved images of people and animals on cave walls. Scientists still aren’t sure why people made art. Perhaps the cave paintings were used to teach people how to hunt, or maybe they had religious meanings.

**Stone Tools**

Did you know that Stone Age people’s tools weren’t as primitive as we might think? They made knife blades and arrowheads—like the one shown below—out of volcanic glass called obsidian. The obsidian blades were very sharp. In fact, they could be 100 times sharper and smoother than the steel blades used for surgery in modern hospitals.

Today some doctors are going back to using these Stone Age materials. They have found that blades made from obsidian are more precise than modern scalpels. Some doctors use obsidian blades for delicate surgery on the face because the stone tools leave “nicer-looking” scars.
Scholars know little about the religious beliefs of early people. Archaeologists have found graves that included food and artifacts. Many scientists think these discoveries are proof that the first human religions developed during the Stone Age.

**Reading Check** Analyzing What was one possible reason for the development of language?

**Section 1 Assessment**

**Reviewing Ideas, Terms, and People**

1. **Identify** Who found the bones of Lucy?  
   **b. Explain** Why do historians need archaeologists and anthropologists to study prehistory?

2. **Recall** What is the scientific name for modern humans?  
   **b. Make Inferences** What might have been one advantage of walking completely upright?

3. **Recall** What kind of tools did people use during the Paleolithic Era?  
   **b. Design** Design a stone and wood tool you could use to help you with your chores. Describe your tool in a sentence or two.

4. **Define** What is a hunter-gatherer?  
   **b. Rank** In your opinion, what was the most important change brought by the development of language?

**Critical Thinking**

5. **Evaluate** Review the notes in your chart on the advances made by prehistoric humans. Using a graphic organizer like the one here, rank the three advances you think are most important. Next to your organizer, write a sentence explaining why you ranked the advances in that order.

6. **Listing Stone Age Achievements** Look back through this section and make a list of important Stone Age achievements. Which of these will you include on your storyboard? How will you illustrate them?
The Iceman

Why was a Stone Age traveler in Europe’s highest mountains?

When did he live? about 5,300 years ago

Where did he live? The frozen body of the Iceman was discovered in the snowy Ötztal Alps of Italy in 1991. Scientists nicknamed him Ötzi after this location.

What did he do? That question has been debated ever since Ötzi’s body was found. Apparently, he was traveling. At first scientists thought he had frozen to death in a storm. But an arrowhead found in his shoulder suggests that his death was not so peaceful. After he died, his body was covered by glaciers and preserved for thousands of years.

Why is he important? Ötzi is the oldest mummified human ever found in such good condition. His body, clothing, and tools were extremely well preserved, telling us a lot about life during the Stone Ages. His outfit was made of three types of animal skin stitched together. He wore leather shoes padded with grass, a grass cape, a fur hat, and a sort of backpack. He carried an ax with a copper blade as well as a bow and arrows.

Drawing Conclusions Why do you think the Iceman was in the Alps?

Scientists examine the Iceman’s body in 1991, before it was removed from the glacier.
Early Human Migration

If YOU were there...
Your tribe of hunter-gatherers has lived in this place for as long as anyone can remember. But now there are not enough animals to hunt. Whenever you find berries and roots, you have to share them with people from other tribes. Your leaders think it’s time to find a new home in the lands far beyond the mountains. But no one has ever traveled there, and many people are afraid.

How do you feel about moving to a new home?

People Move Out of Africa
During the Old Stone Age, climate patterns around the world changed, transforming the earth’s geography. In response to these changes, people began to migrate, or move, to new places.

The Ice Ages
Most scientists believe that about 1.6 million years ago, many places around the world began to experience long periods of freezing weather. These freezing times are called the ice ages. The ice ages ended about 10,000 years ago.

During the ice ages huge sheets of ice covered much of the earth’s land. These ice sheets were formed from ocean water, leaving ocean levels lower than they are now. Many areas that are now underwater were dry land then. For example, a narrow body of water now separates Asia and North America. But scientists think that during the ice ages, the ocean level dropped and exposed a land bridge, a strip of land connecting two continents. Land bridges allowed Stone Age peoples to migrate around the world.
Settling New Lands

Scientists agree that migration around the world took hundreds of thousands of years. Early hominids, the ancestors of modern humans, migrated from Africa to Asia as early as 2 million years ago. From there, they spread to Southeast Asia and Europe.

Later, humans also began to migrate around the world, and earlier hominids died out. Look at the map to see the dates and routes of early human migration.

Humans began to migrate from East Africa to southern Africa and southwestern Asia around 100,000 years ago. From there, people moved east across southern Asia. They could then migrate to Australia. Scientists are not sure exactly how the first people reached Australia. Even though ocean levels were lower then, there was always open sea between Asia and Australia.

From southwestern Asia, humans also migrated north into Europe. Geographic features such as high mountains and cold temperatures delayed migration northward into northern Asia. Eventually, however, people from both Europe and southern Asia moved into that region.

From northern Asia, people moved into North America. Scientists disagree on when and how the first people arrived in North America. Most scholars think people must have crossed a land bridge from Asia to North America. Once in North America, these people moved south, following herds of animals and settling South America. By 9000 BC, humans lived on all continents of the world except Antarctica.

**READING CHECK** Analyzing How did the ice ages influence human migration?
People Adapt to New Environments

As early people moved to new lands, they found environments that differed greatly from those in East Africa. Many places were much colder and had strange plants and animals. Early people had to learn to adapt to their new environments.

Clothing and Shelter

Although fire helped keep people warm in very cold areas, people needed more protection. To keep warm, they learned to sew animal skins together to make clothing.

In addition to clothing, people needed shelter to survive. At first they took shelter in caves. When they moved to areas with no caves, they built their own shelters. The first human-made shelters were called pit houses. They were pits in the ground with roofs of branches and leaves.

Later, people began to build homes above the ground. Some lived in tents made of animal skins. Others built more permanent structures of wood, stone, clay, or other materials. Even bones from large animals such as mammoths were used in building shelters.

New Tools and Technologies

People also adapted to new environments with new types of tools. These tools were smaller and more complex than tools from the Old Stone Age. They defined the Mesolithic (me-zuh-LI-thik) Era, or the Middle Stone Age. This period began more than 10,000 years ago and lasted to about 5,000 years ago in some places.

During the Middle Stone Age, people found new uses for bone and stone tools. People who lived near water invented hooks and fishing spears. Other groups invented the bow and arrow.

POINTS OF VIEW

Views of Migration to the Americas

For many years scientists were fairly certain that the first Americans came from Asia, following big game through an ice-free path in the glaciers.

“Doubtless it was a formidable [challenging] place . . . an ice-walled valley of frigid winds, fierce snows, and clinging fogs . . . yet grazing animals would have entered, and behind them would have come a rivulet [stream] of human hunters.”

—Thomas Canby, 1979, quoted in Kingdoms of Gold, Kingdoms of Jade by Brian M. Fagan

New discoveries have challenged beliefs about the first Americans. Some scientists now are not so sure the first Americans came along an ice-free path in the glaciers.

“There’s no reason people couldn’t have come along the coast, skirting [going around] the glaciers just the way recreational kayakers do today.”

—James Dixon, quoted in National Geographic, December 2000

Why might a scientist change his or her mind about a long-held belief?
In addition to tools, people developed new technologies to improve their lives. For example, some learned to make canoes by hollowing out logs. They used the canoes to travel on rivers and lakes. They also began to make pottery. The first pets may also have appeared at this time. People kept dogs to help them hunt and for protection. Developments like these, in addition to clothing and shelter, allowed people to adapt to new environments.

**Reading Check** Finding Main Ideas

What were two ways people adapted to new environments?

**Summary and Preview** Early people adapted to new environments with new kinds of clothing, shelter, and tools. In Section 3 you will read about how Stone Age peoples developed farming.
Early Domestication

Beginnings of Agriculture

If YOU were there...
As a gatherer, you know where to find the sweetest fruits. Every summer, you eat many of these fruits, dropping the seeds on the ground. One day you return to find new plants everywhere. You realize that the plants have grown from your dropped seeds.

How could this discovery change your way of life?

The Big Idea
The development of agriculture brought great changes to human society.

Main Ideas
1. The first farmers learned to grow plants and raise animals in the New Stone Age.
2. Farming changed societies and the way people lived.

Key Terms
Neolithic Era, p. 41
domestication, p. 41
agriculture, p. 42
megaliths, p. 42

Use the graphic organizer online to take notes on the different changes related to the development of agriculture.
The First Farmers

After the Middle Stone Age came a period of time that scientists call the **Neolithic (nee-uh-li-thik) Era**, or New Stone Age. It began as early as 10,000 years ago in Southwest Asia. In other places, this era began much later and lasted much longer than it did there.

During the New Stone Age people learned to polish stones to make tools like saws and drills. People also learned how to make fire. Before, they could only use fire that had been started by natural causes such as lightning.

The New Stone Age ended in Egypt and Southwest Asia about 5,000 years ago, when toolmakers began to make tools out of metal. But tools weren’t the only major change that occurred during the Neolithic Era. In fact, the biggest changes came in how people produced food.

Plants

After a warming trend brought an end to the ice ages, new plants began to grow in some areas. For example, wild barley and wheat plants started to spread throughout Southwest Asia. Over time, people came to depend on these wild plants for food. They began to settle where grains grew.

People soon learned that they could plant seeds themselves to grow their own crops. Historians call the shift from food gathering to food producing the Neolithic Revolution. Most experts believe that this revolution, or change, first occurred in the societies of Southwest Asia.

Eventually, people learned to change plants to make them more useful. They planted only the largest grains or the sweetest fruits. The process of changing plants or animals to make them more useful to humans is called **domestication**.

**INTERPRETING MAPS**

1. **Location** Which animals were domesticated in Asia?
2. **Location** Where was corn first domesticated?
The domestication of plants led to the development of agriculture, or farming. For the first time, people could produce their own food. This development changed human society forever.

Animals
Learning to produce food was a major accomplishment for early people. But learning how to use animals for their own purposes was almost equally important.

Hunters didn’t have to follow wild herds anymore. Instead, farmers could keep sheep or goats for milk, food, and wool. Farmers could also use large animals like cattle to carry loads or to pull large tools used in farming. Using animals to help with farming greatly improved people’s chances of surviving.

**READING CHECK**  Identifying Cause and Effect
What was one effect of the switch to farming?

**Farming Changes Societies**
The Neolithic Revolution brought huge changes to people’s lives. With survival more certain, people could focus on activities other than finding food.

Domestication of plants and animals enabled people to use plant fibers to make cloth. The domestication of animals made it possible to use wool from goats and sheep and skins from horses for clothes.

People also began to build permanent settlements. As they started raising crops and animals, they needed to stay in one place. Then, once people were able to control their own food production, the world’s population grew. In some areas farming communities developed into towns.

As populations grew, groups of people gathered to perform religious ceremonies. Some put up megaliths. **Megaliths** are huge stones used as monuments or as the sites for religious gatherings.
Early people probably believed in gods and goddesses associated with the four elements—air, water, fire, and earth—or with animals. For example, one European group honored a thunder god, while another group worshipped bulls. Some scholars also believe that prehistoric peoples also prayed to their ancestors. People in some societies today still hold many of these same beliefs.

**Reading Check** Analyzing How did farming contribute to the growth of towns?

**Summary and Preview** Stone Age peoples adapted to new environments by domesticating plants and animals. These changes led to the development of religion and the growth of towns. In the next chapter you will learn more about early towns.

**Section 3 Assessment**

**Reviewing Ideas, Terms, and People**
1. a. Define What is domestication of a plant or animal?
   b. Make Generalizations How did early people use domesticated animals?
2. a. Describe What were gods and goddesses probably associated with in prehistoric religion?
   b. Explain How did domestication of plants and animals lead to the development of towns?

**Critical Thinking**
3. Identifying Cause and Effect Copy the graphic organizer at right. Use it to show one cause and three effects of the development of agriculture.

**Focus on Writing**
4. Beginnings of Agriculture Now that you’ve read about the birth of agriculture, you’re ready to plan your storyboard. Look back through your notes from previous sections and the text of this one. Make a list of the events and ideas you will include on your storyboard. Then plan how you will arrange these items.
Identifying Central Issues

Understand the Skill

Central issues are the main problems or topics that are related to an event. The issues behind a historical event can be varied and complicated. Central issues in world history usually involve political, social, economic, territorial, moral, or technological matters. The ability to identify the central issue in an event allows you to focus on information that is most important to understanding the event.

Learn the Skill

In this chapter you learned about prehistory. Some of the events you read about may not seem very important. It is hard for people in the computer age to appreciate the accomplishments of the Stone Age. For example, adding wooden handles to stone tools may seem like a simple thing to us. But it was a life-changing advance for people of that time.

This example points out something to remember when looking for central issues. Try not to use only modern-day values and standards to decide what is important about the past. Always think about the times in which people lived. Ask yourself what would have been important to people living then.

The following guidelines will help you to identify central issues. Use them to gain a better understanding of historical events.

1. Identify the subject of the information. What is the information about?
2. Determine the source of the information. Is it a primary source or a secondary source?
3. Determine the purpose of what you are reading. Why has the information been provided?
4. Find the strongest or most forceful statements in the information. These are often clues to issues or ideas the writer thinks are the most central or important.
5. Think about values, concerns, ways of life, and events that would have been important to the people of the times. Determine how the information might be connected to those larger issues.

Practice and Apply the Skill

Apply the guidelines to identify the central issue in the following passage. Then answer the questions.

“What distinguished the Neolithic Era from earlier ages was people’s ability to shape stone tools by polishing and grinding. This allowed people to make more specialized tools. Even more important changes took place also. The development of agriculture changed the basic way people lived. Earlier people had been wanderers, who moved from place to place in search of food. Some people began settling in permanent villages. Exactly how they learned that seeds could be planted and made to grow year after year remains a mystery. However, the shift from food gathering to food producing was possibly the most important change ever in history.”

1. What is the general subject of this passage?
2. What changes distinguished the Neolithic Era from earlier periods?
3. According to this writer, what is the central issue to understand about the Neolithic Era?
4. What statements in the passage help you to determine the central issue?
Chapter Review

Visual Summary
Use the visual summary below to help you review the main ideas of the chapter.

Hominids developed in Africa and learned how to use tools. Early humans lived as hunter-gatherers. Humans migrated around the world, adapting to new environments. Eventually, people learned how to farm and raise animals.

Reviewing Vocabulary, Terms, and People

For each group of terms below, write a sentence that shows how all the terms in the group are related.

1. prehistory
   - ancestor
   - hominid
2. domestication
   - Neolithic Era
   - agriculture
3. Paleolithic Era
   - tool
   - hunter-gatherers
   - develop
4. land bridge
   - ice ages
   - migrate
5. society
   - megaliths
   - Neolithic Era

Comprehension and Critical Thinking

SECTION 1 (Pages 28–34)

6. a. Recall What does Homo sapiens mean? When may Homo sapiens have first appeared in Africa?
   b. Draw Conclusions If you were an archaeologist and found bead jewelry and stone chopping tools in an ancient woman’s grave, what may you conclude?
   c. Elaborate How did stone tools change over time? Why do you think these changes took place so slowly?

SECTION 2 (Pages 36–39)

7. a. Describe What new skills did people develop to help them survive?
   b. Analyze How did global climate change affect the migration of early people?
   c. Evaluate About 15,000 years ago, where do you think life would have been more difficult—in eastern Africa or northern Europe? Why?
SECTION 3 (Pages 40–43)

8. a. Define What was the Neolithic Revolution?
   b. Make Inferences How did domestication of plants and animals change early societies?
   c. Predict Why do you think people of the Neolithic Era put up megaliths instead of some other kind of monuments?

Reviewing Themes

9. Geography What were three ways in which the environment affected Stone Age peoples?

10. Society and Culture How did the development of language change hunter-gatherer society?

Using the Internet

11. Activity: Creating a Skit In the beginning of the Paleolithic Era, or the Old Stone Age, early humans used modified stones as tools. As the Stone Age progressed, plants and animals became materials for tools too. Use your online textbook to research the development of tools and the use of fire. Then create a skit that tells about an early human society discovering fire, creating a new tool, or developing a new way of doing a task.

Reading Skills

    Paleolithic Era begins.
    Neolithic Era begins.

    *Homo habilis* appears.
    *Homo erectus* appears.

14. People make stone tools.
    People make metal tools.
    People attach wooden handles to tools.

Social Studies Skills

Identifying Central Issues Read the primary source passage below and then answer the questions that follow.

“Almonds provide a striking example of bitter seeds and their change under domestication. Most wild almond seeds contain an intensely bitter chemical called amygdalin, which (as was already mentioned) breaks down to yield the poison cyanide. A snack of wild almonds can kill a person foolish enough to ignore the warning of the bitter taste. Since the first stage in unconscious domestication involves gathering seeds to eat, how on earth did domestication of wild almonds ever reach that first stage?”

– Jared Diamond, from *Guns, Germs, and Steel*

15. What is the main point of this passage?
16. What does the author suggest is the major issue he will address in the text?

Focus on Writing

17. Creating Your Storyboard Use the notes you have taken to plan your storyboard. What images will you include in each frame of the storyboard? How many frames will you need to tell the story of prehistoric people? How will you represent your ideas visually?

    After you have sketched an outline for your storyboard, begin drawing it. Be sure to include all significant adaptations and developments made by prehistoric people, and don’t worry if you can’t draw that well. If you like, you might want to draw your storyboard in the simple style of prehistoric cave paintings. As the last frame in your storyboard, write a detailed summary to conclude your story.
**Standardized Test Practice**

**DIRECTIONS:** Read each question, and write the letter of the best response.

1. Use the map to answer the following question.

<table>
<thead>
<tr>
<th>Map of the World with Letters</th>
<th>The region in which the first humans lived is shown on the map by the letter</th>
</tr>
</thead>
<tbody>
<tr>
<td>W</td>
<td>A W.</td>
</tr>
<tr>
<td>X</td>
<td>B X.</td>
</tr>
<tr>
<td>Y</td>
<td>C Y.</td>
</tr>
<tr>
<td>Z</td>
<td>D Z.</td>
</tr>
</tbody>
</table>

2. The earliest humans lived
   A by hunting and gathering their food.
   B as herders of sheep and other livestock.
   C alone or in pairs.
   D in farming villages along rivers and streams.

3. The development of farming brought all of the following changes to the lives of early humans except
   A the first human-made shelters.
   B a larger supply of food.
   C the construction of permanent settlements.
   D new types of clothing.

4. The region of the world that was likely occupied last by early humans was
   A northern Asia.
   B southern Asia.
   C North America.
   D South America.

5. Hunter-gatherer societies in the Old Stone Age possessed all of the following except
   A fire.
   B art.
   C bone tools.
   D religious beliefs.

**Connecting with Past Learnings**

6. You know that history is the study of people and events from the past. To learn about prehistory, historians would likely study all of the following except
   A graves.
   B journals.
   C bones.
   D art.

7. A skull from a human who lived during the Neolithic Era would be considered a(n)
   A tool.
   B artifact.
   C fossil.
   D secondary source.
Comparing and Contrasting Societies

Comparing means finding likenesses between or among things. Contrasting means finding differences. You often compare and contrast things to understand them better and see how they are related.

1. Prewrite

Getting Started

Unlike most essays, a compare and contrast paper has two subjects. However, it still has only one big idea, or thesis. For example, your idea may be to show how two societies dealt with the same problem or to show how two human societies changed over time.

Begin by choosing two subjects. Then identify specific points of similarities and differences between the two. Support each point with historical facts, examples, and details.

Organizing Your Information

Choose one of these two ways to organize your points of comparison.

- Present all the points about the first subject and then all the points about the second subject: AAABBB, or block style
- Alternate back and forth between the first subject and the second subject: ABABAB, or point-by-point style

2. Write

This framework will help you use your notes to write a first draft.

Introduction

- Clearly identify your two subjects.
- Give background information readers will need in order to understand your points of comparison between the societies.
- State your big idea, or main purpose in comparing and contrasting these two societies.

Body

- Present your points of comparison in block style or point-by-point style.
- Compare the two societies in at least two ways, and contrast them in at least two ways.
- Use specific historical facts, details, and examples to support each of your points.

Conclusion

- Restate your big idea.
- Summarize the points you have made in your paper.
- Expand on your big idea, perhaps by relating it to your own life, to other societies, or to later historical events.
3. Evaluate and Revise

**Evaluating**
Use the following questions to discover ways to improve your paper.

**Evaluation Questions for a Comparison/Contrast Paper**

- Do you introduce both of your subjects in your first paragraph?
- Do you state your big idea, or thesis, at the end of your introduction?
- Do you present two or more similarities and two or more differences between the two societies?
- Do you use either the block style or point-by-point style of organization?
- Do you support your points of comparison with enough historical facts, details, and examples?
- Does your conclusion restate your big idea and summarize your main points?

**Revising**
When you are revising your paper, you may need to add comparison-contrast clue words. They will help your readers see the connections between ideas.

<table>
<thead>
<tr>
<th>Clue Words for Similarities</th>
<th>Clue Words for Differences</th>
</tr>
</thead>
<tbody>
<tr>
<td>also, another, both, in addition, just as, like, similarly, too</td>
<td>although, but, however, in contrast, instead, on the other hand, unlike</td>
</tr>
</tbody>
</table>

**Help with Punctuation**
Use the correct punctuation marks before and after clue words within sentences. Usually, a comma comes before and, but, for, nor, or, so, and yet, with no punctuation after the word. When they are in the middle of a sentence, clue words and phrases such as however, similarly, in addition, in contrast, and on the other hand usually have a comma before and after them.

4. Proofread and Publish

**Proofreading**
Before sharing your paper, you will want to polish it by correcting any remaining errors. Look closely for mistakes in grammar, spelling, capitalization, and punctuation. To avoid two common grammar errors, make sure that you have used the correct form of –er or more and –est or most with adjectives and adverbs when making comparisons.

**Publishing**
One good way to share your paper is to exchange it with one or more classmates. After reading each other’s papers, you can compare and contrast them. How are your papers similar? How do they differ? If possible, share papers with someone whose big idea is similar to yours.

**Practice and Apply**
Use the steps and strategies outlined in this workshop to write your compare and contrast paper.
